Proudly Presents:
14th EMS /Fire Conference
November 2nd - 4th, 2018
Grand Geneva Resort And Spa
Lake Geneva, WI
THE 2018 EMS TRENDSETTERS EMS/FIRE CONFERENCE IS FOR YOU IF:

* You are an EMS Provider of any level (First Responder, EMT-B, EMT-I, EMT-IV Tech or EMT-P).
* You are a firefighter, police officer, public safety officer, critical care paramedic, nurse, flight nurse, physician assistant or physician.
* You are seeking EMS CEU or CEH’s for the state of Wisconsin or Illinois for up to 19 hours - Friday 8 hours, Saturday 6 hours, Sunday 5 hours.
* Continuing education credit has been applied through the Wisconsin Division of Health, WTC System, National Registry of EMT’s, and the Illinois Division of EMS and Highway Safety.
* You are interested in a relaxed, informative weekend of education, socialization, and networking with friends and colleagues.

CONFERENCE LOCATION:
THE GRAND GENEVA RESORT & SPA
7036 GRAND GENEVA WAY
LAKE GENEVA, WI 53147
ROOM RATES - $99.00 / NIGHT
### 2018 PRESENTERS

<tr>
<td><strong>BOB PAGE</strong></td>
<td>Virginia</td>
<td>Bob Page is an internationally known speaker, instructor, author and paramedic. He is recognized for his energetic, humorous and motivational style. Bob takes ordinarily dry and hard to teach topics and transforms them into a fun, learning experience. He holds a Master’s Degree in Adult Education and has been an instructor for almost 4 decades. He has presented over 2700 seminars worldwide and is recognized by his peers and was awarded the Legends That Walk Among US Award from NAEMSE in 2012.</td>
</tr>
<tr>
<td><strong>DUSTY PAGE</strong></td>
<td>Virginia</td>
<td>Dusty Lynn is a nurse and paramedic who has extensive experience in pediatric care and education. She is a passionate educator with dynamic presentations designed to promote and inspire participants to excel in pediatric care.</td>
</tr>
<tr>
<td><strong>MARTY COOMES</strong></td>
<td>Illinois</td>
<td>Battalion Chief Marty Coomes (ret.) is a 30 year fire Service Professional that worked for Lombard, IL. During his 30 year career he worked as a Firefighter / Paramedic, a Lieutenant on both Engine and Ladder companies, and worked his last 5 years as Battalion Chief. BC Coomes has been a Fire Service Instructor since 1993 and served as Training Coordinator for the Lombard Fire Department for 5 years. He is currently serving as Instructor for the Romeoville Fire Academy in Romeoville, IL.</td>
</tr>
<tr>
<td><strong>BRIAN DONALDSON</strong></td>
<td>Wisconsin</td>
<td>Brian has been active as an EMS volunteer and paid career provider for 35 years, serving at the BLS and ALS levels, both on the ground and in the air. He has served on local and State EMS boards, commissions and tasks forces across Iowa, Nebraska, Colorado, and Wisconsin. A former full-time EMS educator, he is a frequent presenter at conferences and symposia across North America. Currently, he is employed as Director of EMS for Waushara County, WI.</td>
</tr>
<tr>
<td><strong>ED ENRIGHT</strong></td>
<td>Illinois</td>
<td>Deputy District Chief (ret) Ed Enright is a 40 plus year fire service veteran. Chief Enright served the Chicago Fire Department for 36 years as a firefighter Company Officer, Battalion Chief and Deputy District Chief. He is currently a Field Staff Instructor for the Illinois Fire Service Institute, and is a well known, and respected speaker and educator. When it comes to fire training, his passion and excellence are unmistakable.</td>
</tr>
<tr>
<td><strong>DAVID FLADTEN</strong></td>
<td>Wisconsin</td>
<td>David is currently Wisconsin licensed as a Critical Care Paramedic and nationally registered as a Paramedic. He has been a pre-hospital health care provider for 41 years. He is currently an EMS Division Chief for a municipal-based fire department in Southeastern Wisconsin. David has also been an EMS Educator for 38 years. Since 1980, he has been an adjunct faculty for Gateway Technical College. He was recently appointed by the American Heart Association to the American Stroke Association Advisory Committee.</td>
</tr>
<tr>
<td><strong>JOSHUA ISHMAEL</strong></td>
<td>Kentucky</td>
<td>Josh is a highly motivated professional who believes in advocacy, collaboration, integrity and innovation. He is always focused on facilitating improved patient experiences and outcomes through process improvement. He strongly believes increased access, education, public awareness and research make communities better. An EMS Veteran with 16 years’ experience, he is boarded by the American Society of Clinical Pathology and the NREMT. Currently, he is the Coordinator of EMS at St. Elizabeth Healthcare.</td>
</tr>
<tr>
<td><strong>STEVE LOUDON</strong></td>
<td>Wisconsin</td>
<td>Steve has a long history of 45 years of EMS experience with 16 years of law enforcement. He has worked as trauma Coordinator at a Level 1 trauma center and also has 25 years experience as a flight nurse. Currently, he works as TEMS team leader in Walworth County and serves on the Walworth County Sheriff SWAT Team. With his extensive career he also is EMS educator for Mercy Healthcare and is training officer for Delavan Fire Department EMS Division.</td>
</tr>
<tr>
<td><strong>MIKE MASON</strong></td>
<td>Illinois</td>
<td>Lieutenant Mason has been involved with the fire service as an officer with DGFD he was assigned to Truck 1 / Squad 1. He holds a Masters Certificate in Strategic, Tactical and Organizational Leadership. He is also a senior staff instructor as well as director / founder of the not for profit organization RICO FIRE RESCUE Inc.</td>
</tr>
<tr>
<td><strong>KENNY NAVARRO</strong></td>
<td>Texas</td>
<td>Kenny is an Assistant Professor in the Department of Emergency Medicine at the University of Texas Southwestern Medical School in Dallas. Kenny oversees the EMS Continuing Ed program for the Division of EMS at the University and assists in educational oversight for a multi-jurisdictional EMS system. Ken also serves as a Content Consultant for the AHA ACLS Project Team and is a member of both the AHA’s</td>
</tr>
<tr>
<td><strong>BECKY VALENTINE</strong></td>
<td>Massachusetts</td>
<td>Becky has been in EMS since 1992 including transfer, 911, search and rescue, and lecturer at conferences for local and national organizations. Prior to EMS, she ran group homes for the mentally ill / dually diagnosed with intellectually delayed adults for many years. She is an energetic, engaging speaker with a unique approach and perspective. She graduated with a baccalaureate degree in psychology. She currently serves on the NAEMSE Board of Directors as member and secretary.</td>
</tr>

</table>
If anyone told you that you could take a 12 Lead Class and have fun, would you believe them? Presented by Bob Page, Author of the book 12 Lead ECG for Acute and Critical Care Providers, this 8-hour, highly motivating, non-stop interactive course on 12 - Lead ECG is comprehensive including proper lead placement, axis and hemiblock determination, bundle branch blocks, differentiating wide complex tachycardia and myocardial infarction recognition.

Also included is the use of 15 - Lead ECG for increased sensitivity for STEMI. Participants in the program will read approximately 200 12 - Lead ECGs, gaining both experience and confidence in their newly learned skill. This is a great course for EMS and hospitals implementing STEMI programs or for continuing professional development. Don’t be afreaid if you are a BLS provider this course will help you understand the importance of the ECGs.

Be sure to register early to reserve your seat!

Like us on Facebook at EMS Trendsetters
The stethoscope is the symbol of the medical profession, but how many of your students get the proper formal training on how to use it? This class will expose the general lack of knowledge in how to use one. How much did you pay for your stethoscope? In this session, participants are provided down to earth “for dummies” information on various types of stethoscopes and how to use them to get the most out of patient assessments. In this “Ear Opening” session, new and improved methods and techniques are presented and lung and heart sounds presented via stethoscope sounders, so that participants can hear the sounds with their own stethoscopes. That’s right! In this session, participants must bring their own stethoscopes with them.

**How Vital are Vital Signs?**

It is a fundamental skill, getting a “set of vital signs”. We do it without thought. But, are you taking them correctly? It has been said by some that “what difference does it make what I got as long as they “look” okay?” And “you can’t get good vitals in the back of an ambulance anyway, right?” In this revealing session, Bob breaks down the techniques and show you the pitfalls and traps that many providers fall into. Through examples, video, clinical cases and discussion you will understand the conditions when vital signs are critical, and ways to hone your own assessment skills.

**Trauma Interactive**

That’s right, Bob has cooked up another interactive workshop! This is the ultimate participation workshop where the audience will use clickers and other means to get into the presentation and receive immediate feedback and rationale. Test your knowledge of trauma emergencies as Bob covers relevant information on the latest trauma care, injury recognition, assessment findings and current management techniques. It is a great comprehensive trauma review for any level provider. It is part game show, part case study, 100% fun.

**MARTY COOMES**

**Fire Behavior and Tactics in the Modern Single—Family Frame Dwelling**

This a two part course with students becoming familiar with the building construction and floor plans of modern single family frame dwellings, to aid in size up, as well as determine tactics for fire attack in various situations. Fire video examples will be used to challenge students and allow for interactive discussion.

**Essentials of a Good Company Officer; How to Mentor your Aspiring Officers**

Many company officers struggle with Leadership in their first few years, with proper preparation and training this does not have to be the case. This presentation will familiarize students with many of the key elements that make a great company officer. Battalian Chief Coomes will draw on his own experiences as well as examples of both positive and negative qualities displayed in various situations. Leadership on the fire ground as well as in the station will be the focus of this highly interactive lesson.

**BRIAN DONALDSON**

**Cherry Red of Midnight Blue**

Each year in the U.S., more than 2500 deaths and countless illnesses are attributed to carbon monoxide poisoning. If you look in the EMS textbooks, you’ll find little information and a great deal of misinformation related to this common problem. In this interactive discussion, Brian will answer questions related to patients who are at greatest risk of complications from exposures and what the real presenting signs and symptoms may be.

**Cruel Fate**

Trauma junkies will not want to miss this informative presentation detailing crushing type traumatic injuries and associated complications. This presentation discusses forces and injuries commonly producing compartment syndrome and crush syndrome. Prehospital evaluation and care of these injuries is discussed in depth along with an overview of more definitive evaluation and treatment. Both short term and long term complications associated with these syndromes are examined and the process of rhabdomyolysis is discussed.

**What a Wonderful World**

What do a well known major metropolitan career EMS agency and a respected rural volunteer EMS agency have in common? They both saw the same adult onset seizure patient and they both watched the patient refuse treatment and transport. Not a big deal, right? It happens everyday. Join Brian and explore the journey taken by his adult son Eric, starting with some non-specific symptoms, advancing to seizures, surgery and beyond. What are the differential diagnoses for adult onset seizures? Join Brian for a rollercoaster ride and find the answers to these questions and more.

**That Smell**

You’ve known this person for years, but suddenly you’re called to their home and they are now your patient. You arrive to find this patient isn’t acting like the person you’ve known, they are behaving strangely, speaking in a nonsensical manner, acting out violently against you, and staggering about. When you get close enough, you note an odor slightly reminiscent of a locker room, so what’s up? You start through your list of differential diagnoses: intoxication, toxidrome, stroke, head injury, glucose disturbance, electrolyte derangement etc. Join us for this case study that will put your history taking and assessment skills to the test.

**Unskinny Bop**

Few things strike fear into the heart of an EMS professional in the way OB emergencies do! This OB case presentation will cause you to sit up and take notice, as it follows a challenging eclampsia case from initial dispatch through clinical conclusion. Hypertensive complications of pregnancy, including PIH, HELLP Syndrome and eclampsia are reviewed, along with currently accepted therapies.
EDDIE ENRIGHT

**Duty - Pride - Tradition**

This course is designed for all firefighters. It stresses the importance of the core values that make this profession great. “Duty” is doing it, “Pride” is wearing it, and “Tradition” is living it. This two hour course focuses on being a part of a team that achieves its goal of serving its community and helping others. You will leave this course feeling recharged with a desire to serve and proud to wear the Maltese Cross.

**Ethos and Essence: Inside the American Fire Service**

Join Chief Enright in this deep dive moving presentation dealing with the rich traditions and history within the American Fire Service. A deep and spirited look into why we are the way we are and why we do what we do regarding our virtues and motivations. This presentation looks into our commitments and responsibilities to our communities, our fellow man and to each other under the insignia of the Maltese! Two hour session.

DAVID FLADTEN

**Making a Difference—Assessment and Management of Acute Stroke Patient**

Stroke is one of the few true time critical diagnoses EMS encounters. What you do has the potential to make a huge difference in the life of a stroke patient. This session is intended to provide attendees with the most current evidence-based best practices for pre-hospital assessment and management of the acute stroke patient. Attendees will gain an in-depth understanding of stroke pathophysiology and how rapid identification of stroke is key to improving patient outcomes. EMS plays a huge role in successful outcomes in the life of a stroke patient.

JOSHUA ISHMAEL

**Leadership in EMS—Together is Better**

This inspiring and optimistic talk will take us through the New York Times Best Selling Book from Simon Sinek, entitled Together is Better. This book will be applied to our EMS industry with a focus on the next generation of leaders. Most of us live our lives by accident, we live as it happens. Fulfillment comes when we live our lives on purpose. Find a vision, persevere, and be the leader you wish you had!

**Mental Health - Our Achilles Heel**

There are going to be times in our lives that are tough by virtue of what we experience as professionals and human beings. Strength is not shouldering another burden; rather, strength is in letting go and asking for help. This talk will center around how we can better manage our mental health. Discussions about firefighter peer support and my own personal experiences will be shared during this powerful lecture.

**Dangerous Airway: Reframing Management in the Critically Ill**

This talk will take you on quite the journey. Respiration basics on a cellular level will be reviewed through interactive case studies and ETCO2 waveforms...pediatrics included. Disease processes like Anemia, COPD, Anaphylaxis will also be a large focus. We will bring to light current research and trends, and debate death by hyperventilation. Lastly, is preparation and physiology more important than laryngoscopy? Stop by this lecture to find out what critical care experts have to say.

**Beyond the Streets**

Ever wonder what happens with your patient after you leave the ED? This talk presents EMS with a glimpse behind the curtain as clinicians and other allied health professionals try to figure out a patient diagnosis. An emphasis will be placed on a virtual hospital tour with stops in the Cath Lab, L&D, Radiology as well as the clinical laboratory. This talk is based on many images, critical thinking and plenty of audience interaction.

MIKE MASON

**Inside the American Firefighter**

Lt. Mike Mason, reveals an awe inspiring wake-up call to fire departments across America regarding leadership in the sometimes called Para-military environment that is being created in the fire service. Incredible insights are presented through prominent leaders throughout the military and the fire service such as Col. David Hackworth, Lt. Gen. Hal Moore, Infamous Chiefs and Fire Officers in leading their men into battlefields and firefights while having those that follow them believe in their love and trust without question. This lecture through the use of dramatic PowerPoint and powerful video reveals to those attending the true meaning of earning respect from those you command.

**In the Realm of Risk: The Strategic and Tactical Firefight**

This all encompassing seminar provides firefighters through all ranks a look into the overwhelming risks and inherent dangers of firefighting in today’s fire service. Mike takes you into the realities of risk and its consequences in modern day firefighting. This complete program takes an in-depth look into the world of strategic and tactical considerations in surviving the different aggressive postures in firefighting. Some of the most interesting areas to be covered will be, defining and redefining committing firefighters to interior operations, strategic and tactical postures, spirited aggressive actions and with sound decision making.

STEVE LOUDON

**Ten Trauma Tips and Topics**

Get a feel for trauma. Join Steve for this presentation where he discusses field ultrasound, junctional tourniquets, the use of TXA, damage control resuscitation, shock index, and resuscitation fluids and more.

**Abdominal Trauma**

This is a two part presentation with in depth coverage of the assessment of the intraabdominal trauma covering physical assessment, auscultation, ultrasound, and CT scan results of individual organ injuries. This presentation includes a case study taken from an actual multi-system trauma patient.
KENNY NAVARRO

New Concepts in Traumatic Brain Injury Care - Hypotension

Hypotension significantly complicates traumatic brain injury (TBI) and increases adverse outcomes. Because of a loss of autoregulatory reflexes, a blood pressure that falls below a minimum threshold for perfusion to the injured area could worsen neurological damage. The central question is where that threshold lies. Recent evidence suggests traditional EMS definitions of hypotension in TBI may place these patients at an increased risk of neurological impairment or death. This presentation will examine new concepts in the emergency management of TBI, with a specific focus on identifying a hypotension threshold.

Acute Coronary Syndrome Care: Go Home, MONA, You’re Drunk

MONA is an acronym in use for decades to emphasize the first—line therapies for the early management of patients with Acute Coronary Syndrome (ACS). EMS personnel often administer morphine, oxygen, nitroglycerin, and aspirin for symptom relief, to prevent infarction or limit its size, and to improve outcomes. However, recent evidence has challenged the utility of routinely administering these drugs to patients with ACS. This presentation will examine the risks and benefits of continuing to greet chest pain patients with MONA.

CPR - Induced Consciousness: Don’t Go Into the Light

Over the past decade, many EMS systems in this country have placed an emphasis on providing high-quality CPR. One potential consequence of improvements in chest compression quality is CPR-induced consciousness or awareness. In addition to standard ACLS care, patients who exhibit this phenomenon may need treatment interventions not normally provided to other victims of cardiac arrest. This presentation will examine the available evidence surrounding this increasingly occurring phenomenon.

Double—Sequential Defibrillation: Are Tow Shocks Better than One?

Although transporting patients in refractory or recurrent ventricular fibrillation seems reasonable, the dismal quality of manual CPR during transport makes it clear that without achieving ROSC in the field, these patients have little hope for survival. Double-sequential or dual defibrillation may offer a therapeutic solution to terminating VF and achieving ROSC when standard defibrillation techniques fail. This presentation will examine the physiology of refractory and recurrent ventricular fibrillation and the latest evidence surrounding double—sequential defibrillation.

DUSTY PAGE

When Meconium Hits the Fan

Childbirth usually goes without a hitch. But are you prepared if it doesn’t? Join Dusty Lynn as she reviews normal childbirth procedures then jumps right into the times where “meconium hits the fan”! Abnormal presentations and special situations will be reviewed. Leave this station with an idea or tow of what you can do with limited equipment to help with these conditions.

Getting Along in Years

It is estimated that by the year 2030, we will see an increase of more than 70% in the geriatric population, just since the year 2000. Patients 65 years and older use EMS at a higher rate than any other age group. Do you have the knowledge necessary to understand the changes that occur with aging? Can you identify key differences in medication response and effects of poly-pharmacy in the elderly patient? What drug interactions are possible in the geriatric patient? Come join Dusty, as she breaks down the difference between the geriatric population and other adults, in an easy to understand manner. Walk away with tips that will help you understand the important differences in this special population.

Rapid Emergency Pediatric Assessment

When you walk into the room where there is a sick or injured child, can you rapidly assess this child to determine priorities for assessment and management? Join experienced and dynamic pediatric educator Dusty Lynn as she covers it all from the doorway assessment progressing to the full hands on assessment. Dynamic content including actual videos and interactive case studies make this a no-miss session!

Traumatic Brain Injuries in Pediatrics

It is always a critical situation when a child has a traumatic brain injury. But do you really know how to assess and manage this special population? Dusty has the latest on pediatric TBI assessment and manage from the prospective of a major pediatric trauma center. She delivers actual cases and breaks down every event in the time line while you interact on “what would I do”. Join Dusty as she walks you through the latest guidelines to improve your TBI care for the pediatric patient.

REBECCA VALENTINE

Migraines Can Kill You

Your patient is complaining of being dizzy and doesn’t remember where they’ve been all day. You start forming your differential diagnoses as you assess. There are plenty of things that could be causing this. We will explore why this might be an atypical type of migraine as well as explore other presentations which could signal this neurological disorder.

Liar, Liar, Clinical Depression

Clinical depression is a soul killer and a liar. It isolates people into believing that they have few options left. No one waits for Stage 4 cancer before treating it. Why does the medical community continue to stigmatize patients who have issues with mental health until crisis occur? In this session, we will take a closer look at different patient presentations of this gut wrenching sometimes life ending disease.

You Don’t Have to Sugar Coat it

Diabetic reactions and hypoglycemia are common emergencies seen by EMS. During this talk, we’ll explore the not just the highs and the lows of how diabetes and other sugar issues. We will look at how and why the associated signs and symptoms of this devastating disease put the patient in greater danger.

EW! What’s that Rash?

You are dispatched for the person not feeling well, pretty typical. You get on scene and the person has a nasty rash. You pause to put on your personal protection equipment because this might be something you can catch. Let’s try to figure out what the rash is, why it’s there and if it will harm you in any way.
Conference Hotel

Grand Geneva Resort & Spa
7036 Grand Geneva Way
Lake Geneva, WI 53147
Reserve your room Prior to October 1, 2017
For Rate: $99.00 / night
Reserve your room online at
www.emstrendsetters.org

Saturday Night

5:00 - 6:00 pm Cocktail Hour with Vendors
Located in Forum A

6:00 - 7:00 pm Dinner
Located in Forum C

7:00 - 10:00 pm CASINO NIGHT

After a long day of conferencing, come and unwind at the dinner and party.
Raffles will also be drawn through out the night.
